

HAMCATION 2021 RV PARKING

This map shows which type of power is available in the RV parking Pods. Yellow boxes denote 50 amp power along with 30 amp power. Blue boxes will have only 30 amp power. At each yellow pod there will be a minimum of two 50 amp outlets, and numerous 30 amp outlets. Blue pods will have only 30 amp service available.

In 2021 we will be parking an average of 9 RVs per pod, with expansion up to 12 RVs in a pod. Park with your RV facing north/south. Park up to 6 RVs north of the pod power pole, and allow up to 6 more RVs to park south of the pod power pole. This will result in best access to power for everyone.

Each pole has one or two water faucets. We recommend using water from your fresh water tank, and refilling the fresh tank when needed. However, if you will need to be hooked up to water full time we do have Y connectors available for loan at the RV tent (located at the **Red 1**).

This is what a pod of RVs should look like:
